## Andreas Schwambach GRR20191920

Equação do Balanço de Energia:

## Hipóteses:

- 1. Regime estacionário  $\frac{\partial T}{\partial t} = 0$
- 2. Sem geração $\rightarrow \dot{g} = 0$
- 3. Propriedades constantes  $\rightarrow k = cte$
- 4. Sistema unidimensional
- Avalie a resistência R em parede cilíndrica com transferência de energia na direção radial.
   Desenvolva todo o BE e identifique a resistência.

$$\frac{1}{n} \frac{\partial}{\partial n} \left( n \frac{\partial}{\partial n} \right) + \frac{\partial}{\partial n} = \rho \cdot (q \cdot \partial f)$$

$$\frac{1}{n} \frac{\partial}{\partial n} \left( n \frac{\partial}{\partial n} \right) + \frac{\partial}{\partial n} = \rho \cdot (q \cdot \partial f)$$
